

Model 25-40

## DATA SHEET

### trak | acidfiller

Product group - trak | battery filling devices

## DESCRIPTION

Model 25 Battery Filling Devices Series is characterized by a high operational stability and simple operation.

Accompanying rubber spacers allows adaptation to a number of different sizes of batteries. The acid is raised using a vacuum from the can to the batteries when the filling lever is activated, and excess acid runs automatically back into the can when the lever is released and the vacuum removed.

Model 25-40 is stationary and designed for a constant 230V AC connection without a battery inside. The device can be mounted on the wall.

## FUNCTIONS

- Simple operation
- Designed for most battery manufacturers
- Includes five rubber spacers for adjusting the filling height
- Includes rubber adapters for lids with joint ventilation (camina lids)
- No acid spillage (under normal use)
